CLAYTON REITZ

PROFILE

Independent Software Architect and Senior Engineer with 10+ years of experience delivering scalable, secure, and high-performance systems across enterprise and real-time domains. My background blends Social Science and ICT, giving me a uniquely analytical, structured, and human-centric approach to engineering and system design.

Since January 2026, I have operated as a ZZP'er, supporting organizations with architectural leadership, full-stack development, cloud-native modernization, and advanced engineering practices across Java, Spring Boot, microservices, Angular, DevOps, and distributed real-time platforms.

CORE SKIILS

AI/ML

- TensorRT, PyTorch, TimesFM, amazon Chronos-2,CUDA (Parallel Calc)

Blockchain

- Jito-Solana, Helius Yellowstone gRPC, SPL-Token.

Backend Engineering

- Java (8–21), Spring Boot, Spring Batch, JPA/Hibernate, REST APIs
- Microservices architecture, domain-driven design, CQRS
- High-performance, scalable backend systems
- Integration with Oracle, PostgreSQL, DB2, Redis

C# / .NET Engineering

- C#, ASP.NET MVC, Web Forms
- Entity Framework, LINQ, SQL Server, SSRS
- CRM365 customization and integration
- Integration with Oracle, PostgreSQL, DB2, Redis
- Visual Studio, TDD, enterprise support workflows

Enterprise Insurance Systems

- Guidewire PolicyCenter (Java/Gosu)
- Mainframe modernization
- Large-scale insurance workflow engineering

Full-Stack Development

- TypeScript, Angular (14–19), Ionic, RxJS, NgRx
- Responsive UI development, component-driven architecture
- Real-time frontends using WebRTC, LiveKit, MQTT, WebSockets

Cloud & DevOps

- Docker, Docker Compose, Kubernetes, OpenShift
- CI/CD (GitHub Actions, GitLab, Tekton, Azure DevOps)
- Nginx reverse proxy, SSL automation (Certbot)
- Cloud platforms: Azure, AWS, Linode

Real-Time & Distributed Systems

- MQTT (Mosquitto), Redis (caching, sessions), WebRTC
- Event-driven architecture, low-latency messaging
- LiveKit audio/video integration

Testing & Quality Engineering

- JUnit, Mockito, Jasmine/Karma
- Testcontainers (Ryuk), containerized integration testing
- Automated end-to-end testing for backend and frontend systems

Agentic AI & Automation

- LangSmith, LangGraph, LangChain

- Model Context Protocol (MCP)
- AI-augmented software engineering workflows
- RAG

Architecture & Leadership

- System design, solution architecture, cloud-native modernization
- Coaching teams, onboarding developers, leading SCRUM ceremonies
- Designing scalable, maintainable, future-proof systems

Enterprise Integration & Messaging

- IBM MQ (queue managers, monitoring, queue-depth analysis
- IBM Integration Bus (IIB v8) – SOAP/REST services, WSDLs, message flows
- WebSphere Application Server, WebSphere MQ, WebSphere Process Server
- JBPM workflow integration with REST services
- JMS, JavaMail API, high-scale messaging systems
- JBoss/WildFly, Tomcat, enterprise deployment environments

PROFESSIONAL EXPERIENCE

ClayBytes — Independent Software Architect & Senior Engineer (ZZP)
Jan 2026 – Present Zaandam, NL

Providing architectural, backend, full-stack, and AI-augmented engineering services across Java/Spring Boot, microservices, Angular/TypeScript, cloud-native systems, real-time communication, and agentic AI workflows. Supporting clients with system design, modernization, and high-performance engineering across distributed and real-time domains.

Selected Independent Work

Real-Time Multiplayer Game Platform:

- Architected and developed a full-stack real-time multiplayer game using **Spring Boot**, **Angular 19**, **Ionic**, **Redis**, **MQTT**, **LiveKit**, and **Docker**.
- Implemented low-latency messaging, real-time state synchronization, and scalable containerized deployments.

Deep-Agent AI Engineering Workflow:

- Designed and implemented a bespoke agentic engineering workflow using **LangGraph**, **LangChain**, **DeepAgents**, **Model Context Protocol (MCP)**, and **LangSmith**.
- Built a modular tool-server architecture enabling reproducible agent behavior, structured memory, and multi-agent orchestration.

High-Frequency Trading (HFT) Engine (v1.0 & v2.0 R&D)
(In active development — ClayBytes internal product)

Architecting a sub-millisecond Solana MEV (Maximum Extractable Value) and Arbitrage engine optimized for pre-consensus execution and real-time market synthesis.

Low-Latency Infrastructure (The Zaandam Edge):

- Engineered a Rust-based execution core that leverages a dedicated 1Gbps fiber connection in Zaandam (NL), achieving <1ms round-trip latency to the Amsterdam Jito Block Engine.

- Bypassed Linux kernel overhead using Yellowstone Geyser (gRPC) and Helius LaserStream for raw mempool data ingestion.

GPU-Accelerated Strategy Engine:

- Implemented TensorRT (.plan) inference pipelines to run three concurrent predictive models (Sniper, Arbitrage, DCA) on an NVIDIA 4070 GPU.
- Optimized data throughput via CUDA Unified Memory and non-blocking streams, enabling model inference and pathfinding calculations in <200µs.

MEV-Aware Execution Layer:

- Developed Jito-Solana bundle logic to execute atomic trades (Sandwiches/Arbitrage), utilizing dynamic "tip" calculation to win validator auctions without over-bidding.
- Built a "Safety Filter" that performs real-time de-compilation of new token contracts to detect "freeze-authority" and "mint-authority" rugs before execution.

Agentic Orchestration & Observability:

- Orchestrated a multi-agent system (LangGraph) using a Synthesizer Pattern for global state management and strategy-level introspection.
- Deployed a full Prometheus/Grafana stack for nanosecond-level telemetry, tracking RPC timings, bundle success rates, and GPU utilization.

Time-Series & State Management:

- Integrated Redis Stream/TimeSeries for high-frequency ingestion of market data, maintaining an in-memory "shadow state" of top liquidity pools (Raydium, Orca) for zero-network price calculation.

PROFESSIONAL EXPERIENCE (Employee Roles)

AAme Flex Solutions B.V. — Senior Java Engineer
Aug 2025 – Nov 2025 ,NL (Remote)

Client: Dictu (via TCS)
Aug 2025 – Nov 2025 The Hague, NL (Remote)

Delivered a critical modernization initiative for DICTU's "Jaarnota" (annual statement) process, building a robust Spring Batch automation solution that integrates deeply with legacy Oracle PL/SQL logic while preparing the system for modern CI/CD pipelines.

Backend Automation & Batch Processing:

- Designed and developed a resilient **Spring Batch** solution to automate the "Jaarnota" annual-statement workflow, including complex peildatum (reference-date) validation and processing logic.

Legacy Oracle Integration:

- Integrated extensive **Oracle PL/SQL** procedures into modern Java 17/21 batch workflows, ensuring accurate data handling and compatibility with existing business rules.

Modern Testing Strategy:

- Introduced **Testcontainers** with an Oracle database image to create isolated, reproducible integration tests.
- Validated PL/SQL logic directly against the Java batch application without relying on shared or unstable test environments.

Enterprise-Grade Architecture:

- Built a maintainable, scalable batch application using **Java 17/21**, **Spring Boot**, and enterprise coding standards, bridging legacy systems with modern Java ecosystems.

DevOps & CI/CD Enablement:

- Prepared the application for integration into **GitHub/GitLab** CI/CD pipelines, enabling automated builds, testing, and deployment.

Collaboration:

- Worked closely with architects, analysts, and PL/SQL specialists to ensure functional accuracy and alignment with DICTU's enterprise architecture.

Eonics B.V. — Senior Full-Stack Java Engineer
Oct 2024 – Dec 2024 The Hague,NL (Hybrid)

Client: Detransparantebroker.nl (via Eonics)
Oct 2024 – Dec 2024 The Hague,NL (Hybrid)

Delivered backend and full-stack engineering for Detransparantebroker.nl, modernizing backend services, strengthening integration reliability, and supporting frontend development on a high-traffic platform.

Backend Development & Integration:

- Designed, developed, and maintained backend services using **Java 17** and **Spring**, ensuring high performance, scalability, and clean domain logic.

Database Engineering:

- Implemented and optimized data persistence using **PostgreSQL**, **JDBC**, and **JPA**, ensuring efficient data access and strong data integrity.

Containerized Integration Testing:

- Built comprehensive integration tests using Docker **Testcontainers.**

Email Integration:

- Implemented and tested email workflows using **JavaMailServer** and **MailHog**, ensuring safe and verifiable email delivery in production environments.

Outtask B.V. — Senior Full-Stack Java Engineer
Nov 2023 – Oct 2024 Amsterdam, NL (Hybrid)

Client: Belastingdienst (via Outtask)
Jan 2024 – Jul 2024 Apeldoorn, NL (Hybrid)

Delivered secure, compliant, and scalable backend and full-stack engineering for the Dutch Tax Authority's catalog system, modernizing REST APIs, strengthening data integrity, and deploying cloud-native services on OpenShift.

Backend System Development:

- Designed, developed, and maintained backend services using **Java 17** and **Spring**, ensuring high performance, reliability, and compliance with government standards.

Database Engineering:

- Implemented and optimized data persistence using **JDBC**, **Hibernate ORM**, **JPA**, and SQL, ensuring accurate and efficient data retrieval.

API Development & Design:

- Built new REST endpoints for the **Belastingdienst catalog API**, enabling secure and structured data exchange across internal systems.
- Contributed to API design decisions, ensuring scalability, maintainability, and alignment with enterprise architecture guidelines.

Data Management:

- Implemented new **delete endpoints** for catalog components, enabling removal by **object type UUID** or **code**, improving data accuracy and compliance.

Security:

- Applied **Spring Security** to protect REST endpoints, ensuring proper authentication, authorization, and secure data operations.

DevOps & CI/CD:

- Containerized services using **Docker**.
- Deployed cloud-native applications on **OpenShift**.
- Built CI/CD pipelines using **Tekton**, enabling automated testing, building, and deployment.

- Used **Bitbucket** for version control and **Azure DevOps** for project management.

Agile Delivery:

- Worked in a SCRUM environment, collaborating with cross-functional teams using Jira, Confluence, and Nexus
- Delivered cloud-native services on OpenShift with Tekton CI/CD pipelines.
- Collaborated across teams using Jira, Confluence, and Agile/SCRUM practices

Weird B.V. — Senior Java Engineer / Senior Frontend Engineer
Dec 2021 – Oct 2023 Hilversum, NL (Hybrid)

Served as a senior engineer across multiple client projects, leading backend modernization efforts, designing cloud-native architectures, and delivering high-performance microservices using Java, Quarkus, and modern DevOps tooling.

Backend Architecture & Development:

- Designed, developed, and maintained robust backend systems using **Java 17**, applying modern architecture principles to ensure scalability, performance, and maintainability.

Microservices Engineering:

- Built microservices using **Quarkus/GraalVM** and **Spring Boot**, implementing REST APIs, domain logic, and high-throughput service components.

Data Persistence & Storage:

- Implemented data persistence using **JDBC**, **JPA**, **Hibernate** ensuring data integrity and efficient query performance.
- **Data Streaming & Observability:**
  Integrated **Elastic ELK stack**, **Prometheus**, and **Kafka** to support real-time data streaming, monitoring, and logging across distributed systems.

DevOps & Cloud Engineering:

- Containerized applications using **Docker** and orchestrated deployments with **Kubernetes**, **OpenShift**.
- Built CI/CD pipelines using **GitHub Actions**, **GitLab CI**, and **Azure DevOps**, enabling automated testing, building, and deployment.
- Leveraged **Azure Cloud** for infrastructure, scaling, and environment management.

Monitoring & System Health:

- Used **Unix/Linux** tooling, Elastic, and Prometheus to monitor system performance, logs, and operational metrics.

Testing & Quality Engineering:

- Applied **TDD** practices and implemented comprehensive test suites using **JUnit 5**.

Collaboration & Delivery:

- Worked in an Agile/SCRUM environment, collaborating with cross-functional teams to deliver high-quality software across multiple client engagements.

Database Engineering:

- Worked with both **SQL** and **NoSQL** databases, optimizing schemas, queries, and data flows for performance and reliability.

Client: Gardsign.nl (via Weird) — Lead Java Engineer
Jan 2023 – Oct 2023 Utrecht, NL (Hybrid)

Led the modernization of Gardsign's online garden-design platform, transforming a legacy PHP Symfony monolith into a scalable, cloud-native Java/Quarkus backend with modern DevOps, containerization, and CI/CD practices.

Backend System Architecture & Migration:

- Led the migration from a **PHP Symfony monolith** to a **Java 17+ Quarkus-based REST API**, designing the new architecture, data flows, and service boundaries. **API Development & Integration:** Built high-performance REST APIs enabling seamless communication between frontend and backend systems, including authentication, data modeling, and business logic.

Database Engineering:

- Designed and optimized persistence layers using **PostgreSQL**, writing complex SQL queries and ensuring efficient data access patterns.

Containerization & Orchestration:

- Implemented fully containerized environments using **Docker** and **Kubernetes**, enabling scalable deployments and consistent development workflows.

API Gateway & Load Balancing:

- Configured API gateway and **NodeBalancer** to manage routing, load distribution, and secure access to backend services.

Cloud Infrastructure:

- Managed production infrastructure on **Linode**, including provisioning, scaling, monitoring, and cost-efficient resource management.

DevOps & CI/CD:

- Built and maintained CI/CD pipelines using **GitHub Actions**, automating testing, building, and deployment across environments.

Testing & Quality Engineering:

- Applied **TDD** practices and implemented comprehensive backend test suites using **JUnit 5**.

Mentoring & Leadership:

- Coached junior developers on Java, REST API design, containerization, and modern development practices.

System Monitoring:

- Used Unix/Linux tools to monitor system health, logs, and performance metrics.

Agile Collaboration:

- Worked in a SCRUM environment, collaborating with designers, frontend engineers, and product stakeholders to deliver high-quality features.

Client: Omnia Retail (via Weird) — Senior Frontend Engineer
Jun 2022 – Dec 2022 Amstel, NL (Onsite, Remote)

Worked on Omnia Retail's dynamic pricing platform, leading the modernization of a large legacy AngularJS application and delivering a scalable, component-driven frontend architecture using modern Angular and TypeScript.

Full Migration to Angular 14:

- Rewrote and ported the dynamic pricing product from **AngularJS 1.7** to **Angular 14**, transforming a legacy codebase into a modern, maintainable, and scalable frontend system.

Component-Driven Architecture:

- Built modular UI components using **Angular libraries**, following best practices for isolation, reusability, and long-term maintainability.

Storybook-Driven Development:

- Developed each component in isolation using **Storybook**, enabling visual testing, documentation, and incremental assembly of complex UI flows.

Performance & Maintainability Improvements:

- Refactored legacy logic, optimized rendering performance, and reduced technical debt across the frontend codebase.

Cloud-Integrated Development:

- Worked with **Azure** as the cloud provider for CI/CD, artifact hosting, and development workflows.

Modern Frontend Engineering:

- Delivered clean, typed, and testable code using TypeScript, Angular CLI, and modern tooling.

Client: ABB E-Mobility (via Weird) — Senior R&D Java & Embedded Engineer
Jan 2022 – Jun 2022 Eindhoven, NL (Hybrid)

Worked within ABB's R&D division for e-mobility, contributing to the next generation of EV charging infrastructure by integrating embedded systems, developing high-performance HMIs, and bridging low-level hardware with cloud-connected software.

Embedded Systems Integration:

- Developed and integrated low-level edge computing components into ABB's charging infrastructure, ensuring seamless communication between embedded hardware and backend systems.

HMI Backend & Integration:

- Built a high-performance HMI using TypeScript, focusing on backend logic, device communication, and integration with embedded systems.

Low-Level Cross-Language Integration:

- Integrated a native TypeScript application with **C++** and **embedded Java SDKs**, enabling real-time control and telemetry from ABB's charging hardware.

Performance Optimization:

- Designed and implemented optimizations to improve HMI responsiveness, resource utilization, and overall system stability across embedded Linux devices.

Cloud & DevOps Engineering:

- Used **Azure** for cloud-based HMI builds and deployment pipelines. Leveraged **Linux** and **Git** for version control, release management, and automated build workflows.

Developer Experience Improvements:

- Enhanced native HMI development workflows by introducing **WSL2** on ABB hardware, significantly reducing build times and improving developer productivity.

API Development:

- Built RESTful APIs to support communication between frontend, backend, and embedded components.

Testing & Quality:

- Implemented automated testing using **Selenium**, ensuring stable releases across embedded and cloud environments.

Database Management:

- Utilized SQL for data storage, configuration, and diagnostic workflows.

Agile Collaboration:

- Worked within a SCRUM environment, collaborating with embedded engineers, cloud teams, and UI/UX specialists to deliver high-quality R&D features.

Freelance Claybytes — Full-Stack Engineer
Dec 2018 – Sep 2021 ZA, (Remote)

Real-Time Video Conferencing (OpenVidu / WebRTC):

- Designed, developed, and deployed a **real-time video conferencing platform** using **OpenVidu** (WebRTC) on **AWS EC2 Linux** instances.
- Implemented **secure site-to-site encrypted communication** using **OpenVPN** on AWS EC2, enabling protected video calls between distributed client environments.
- Built automated provisioning and infrastructure using **AWS CloudFormation**, choosing it over CDK due to maturity and production stability at the time.
- Managed end-to-end deployment pipelines, server hardening, SSL, and uptime monitoring.

E-Commerce & Cloud Hosting:

- Built and deployed a **Shopify-integrated e-commerce solution** with custom WordPress components.
- Hosted and maintained all infrastructure on **AWS Free Tier**, leveraging EC2, ELB, Route53, and CloudFormation for cost-efficient scalability.

- Delivered custom frontend components using **AngularJS, jQuery**, and modern JavaScript tooling.

Backend & API Development:

- Developed REST APIs using **Java 11**, **Spring Boot**, and containerized development environments.
- Implemented secure authentication, session management, and integration with third-party services.
- Delivered responsive UI components using AngularJS, Angular 2+, TypeScript, Bootstrap, and WebPack.

Client: Agricon (via ClayBytes)— Technology Advisor & Prototyping Engineer
(Stealth-mode agricultural technology startup)

Supported an early-stage agri-tech startup building drone-based telemetry and remote hardware control systems.

- Participated in early ideation workshops as a **technology advisor**, shaping product direction and feasibility.
- Designed a **cloud-native reference architecture** for IoT telemetry, remote device control, and data ingestion.
- Built rapid prototypes of APIs, dashboards, and IoT workflows using **Node-RED**, Java, and AWS services.
- Contributed to early proof-of-concepts involving drones, sensors, and real-time monitoring pipelines.

i1Solutions — Senior Java Engineer
Jan 2016 – Sep 2017 Cape-Town, ZA (Hybrid)
Client: Metropolitan Health Group (via i1Solutions)
Jan 2016 – Sep 2017 Cape Town, South Africa (On-Site)

Worked within Metropolitan Health Group's enterprise engineering division, delivering large-scale backend, messaging, and integration solutions across IBM MQ, IBM Integration Bus, WebSphere, and high-compliance systems.

Enterprise Backend Development:

- Designed, developed, and implemented enterprise-grade backend components using **Java 8**, **JEE**, **DB2**, **PL/SQL**, and **WebSphere Application Server**.

- Built robust business logic layers supporting high-volume healthcare workflows and strict compliance requirements.
- Implemented secure authentication, session management, and integration with third-party services.

IBM Integration Bus (IIB) Engineering:

- Developed and maintained **IBM Integration Bus (IIB v8)** message flows, including **WSDL creation**, **SOAP/REST service integration**, and complex transformation logic.
- Implemented message routing, validation, and orchestration across distributed systems.

IBM MQ & Messaging Infrastructure:

- Installed, configured, and maintained **IBM MQ** environments, including queue managers, channels, monitoring tools, and proactive queue-depth analysis.
- Developed messaging workflows using **JMS** and **JavaMail API**, improving throughput and reliability.

Workflow & BPM Integration

- Integrated **JBPM** workflows with RESTful services, implementing business rules, persistence, messaging, and transactional logic.
- Delivered **IBM BPM (WebSphere Process Server)** deployments, collaborating with architects to design scalable integration solutions.

Application Server Engineering:

- Delivered solutions across **JBoss/WildFly**, **Tomcat**, and **WebSphere**, ensuring stability and performance in high-scale enterprise environments.
- Monitored application server health using performance monitoring interfaces and log analysis to identify and resolve bottlenecks.

Data Quality & Automation:

- Applied **TDD** practices using **JUnit**, delivering stable, maintainable code in a high-compliance healthcare environment.

Testing & Quality Engineering:

- Automated detection and removal of duplicate customer communications, significantly improving data accuracy and operational efficiency

Agile Collaboration:

- Worked within Agile/SCRUM teams, contributing to design discussions, sprint planning, and iterative delivery across cross-functional teams.

Santam Financial Insurance Ltd.— CRM365 Integration Developer (C# / .NET)
Feb 2014 – Dec 2015 Cape Town, South Africa (On-Site)

Worked within Santam's enterprise CRM365 environment, delivering deep integration engineering, production support, and full lifecycle development across C#, ASP.NET, SQL Server, and CRM workflows.

CRM365 Integration & Support:

- Provided 2nd-line support for CRM365, troubleshooting complex issues across integrations, workflows, and custom modules.
- Analyzed production incidents, system behavior, and user-reported issues to ensure stability and SLA compliance.

C# / .NET Development:

- Developed code fixes, enhancements, and new features using **C#, ASP.NET MVC, Web Forms**, and **Visual Studio**.
- Followed strict **TDD** practices to ensure reliability and maintainability in a high-compliance environment.

Database Engineering:

- Worked extensively with **Entity Framework**, **T-SQL**, and **SQL Server Reporting Services (SSRS)**.
- Designed and maintained stored procedures, triggers, views, and reporting logic.

Lifecycle Delivery & Deployment:

- Delivered change requests into production environments with minimal downtime.

- Participated in analysis, testing, deployment, and post-production support.

Stakeholder Collaboration:

- Provided clear written and verbal updates to management and business stakeholders.
- Led meetings for escalated incidents and coordinated cross-team resolution efforts.

Data Integrity & System Reliability:

- Contributed to improvements in CRM data quality, integration stability, and long-term maintainability.

Santam Financial Insurance Ltd.— Java / Guidewire Developer
Feb 2013 – Dec 2014 Cape Town, South Africa (On-Site)

Contributed to Santam's large-scale digital transformation program, replacing legacy mainframe processes with the Guidewire PolicyCenter platform and modernizing core insurance workflows.

Backend Development (Java / Guidewire):

- Developed backend components using **Java, J2EE, Spring, Hibernate, JPA**, and **Oracle PL/SQL**.
- Implemented scalable policy workflows aligned with Guidewire architecture.

Frontend & UI Engineering:

- Built highly usable GUIs using **Spring MVC, JSP, Struts, HTML5, CSS3, JavaScript, jQuery, AJAX**, and JSON integrations.
- Improved usability and consistency across customer-facing and internal tools.

Integration & Web Services:

- Configured and consumed **SOAP/REST** services using Eclipse and enterprise integration patterns.
- Ensured reliable communication between Guidewire modules and external systems.

Architecture & Design:

- Created UML artifacts (Class, Sequence, Use Case diagrams) to support architectural clarity and cross-team communication.
- Used **Maven** for build automation and deployment across web/app servers.

Testing & Quality Engineering:

- Ensured code quality through rigorous **JUnit** unit testing and integration testing across distributed systems.

Mainframe Modernization:

- Supported the migration of core insurance processes from legacy mainframe systems to modern Java/Guidewire stacks.
- Contributed to one of South Africa's largest insurance modernization programs.

Western Cape Government – Department of the Premier — Software Developer
Jun 2012 – Dec 2012 Cape Town, South Africa (On-Site)

Supported the Premier's Office with database administration, CMS maintenance, and UI improvements across Oracle-based systems.

Database Administration (Training Role):

- Assisted senior DBAs with **Oracle SQL 10g** and **MySQL** administration tasks.
- Gained hands-on experience with queries, schema updates, and data maintenance.

CMS Maintenance & Upgrades:

- Maintained and upgraded the Premier's Office CMS built on **Oracle Web Forms** and legacy systems.
- Performed manual version upgrades and coordinated with internal users.

UI/UX Improvements:

- Contributed to the look-and-feel enhancements of the CMS platform, improving usability for government staff.

User Support & Training:

- Conducted micro-training sessions for CMS users during upgrade cycles.
- Provided guidance on new features and system changes.

Waterfall Delivery:

- Worked within a Waterfall methodology, participating in documentation, testing, and controlled release cycles.

EDUCATION

University of the Western Cape — Postgraduate Diploma in Information Technology (PGDIT)
Graduated 2013 | Cape Town, South Africa

University of the Western Cape — Bachelor of Arts (Social Science)
Graduated 2012 | Cape Town, South Africa

LANGUAGES

English — Native
Used daily in professional, technical, and client-facing communication.

Afrikaans — Native
Fluent in both formal and informal contexts.

Dutch (Nederlands) — B2–C1 professional proficiency
Comfortable in technical discussions, documentation, and day-to-day business communication.
